Well Harvester™

With our patented Well Harvester, the market for a low yield well solution has vastly improved with an unparalleled advancement in technology and innovation. There has never before been a product as easy to use, capable, and reliable as the Well Harvester.

How it **works.**

1. Water is pumped from the well into the tank

2. The control box only pumps when the well has water available, never over-pumping the well.

3. A booster pump then pumps the water from the tank to pressurize the house.

4. The house now has water available to use!

Against The Competition

See how our Well Harvester™ stacks up against the competition.

The Competition

STORES UP WATER

PRESSURIZES HOUSE

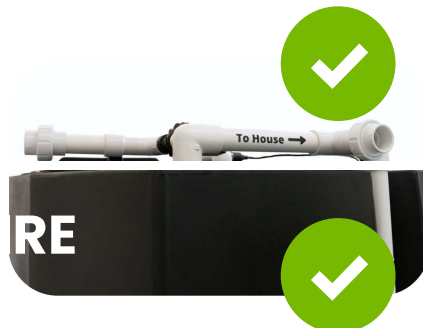

OPTIMIZES EVERY 3 MONTHS

Well Health

When it comes to low producing wells, over pumping the well can cause complications like reduced water production.

Our system will pump water out of the well and stop pumping before the well runs out of water. All of this is done

Water To use

We have seen firsthand how disappointing it is to not have enough water for the household needs. The frustration in having to limit the number of times a toilet is flushed, not being able to run the dishwasher, or water a garden. For our delight, this system has

Hands Free

We know that time is really important to you! When we designed this system we made it as easy to maintain as possible. After installation, start it up and forget it completely. No adjustments needed. The system will run its own tests and will make its own

automatically, with no timers or manual switches.

been solving many of these problems and more for our customers! Our system harvests and stores all available well water throughout the day and night, when it is needed, it will be there ready to use.

adjustments to give the most well water while protecting the well from over-pumping. Take back your time and peace of mind!

Touchscreen

The Well Harvester comes with a fully functioning 7-inch touchscreen. This screen displays how much water is in the tank, the water pump status, the house pressure measurement, and how much water has been used over the past 3 months. It can also be used to manually turn on or off the pumps, if needed.

Optimizations

Every 3 months our system will run a system optimization. It will run these optimizations to secure as much water available to be stored up while also ensuring the well will not run dry due to over-pumping. Water tables constantly change due to things like climate and weather, and every customer's situation is different. The system will tailor to the specific needs of each well. These

High Tech And Compact

Our system uses state of the art technology to control all of it's aspects.

Rather than using antiquated tech like large timers, our system is run from a main PLC computer that has been programmed to run all the complex functions contained within the computer. This saves on space and brings much more functionality and

perfectly for any situation.

reliability, along with a
clean design.

Custom Engineered **Tank**

Our custom engineered tank has been designed to fully integrate every component to maximize tank capacity, while maintaining a small and sleek design. The tank is food grade and FDA approved for storage of potable water.

Fully Automated.

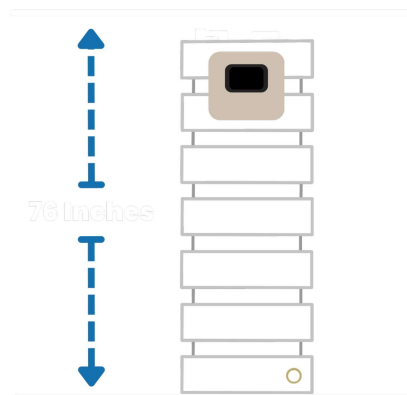

Once the Well Harvester has been installed, the system will automatically do its job of water harvesting and regulation. The best news about this is there is no need for

checking in on the system or adjusting timers! Have the most water available to you
worry free!

Is it for me?

There are some cases where our system isn't what your looking for. Click the link
below to make sure that our system will work for your specific situation.

Well Harvester™

Specifications

Tank Storage Capacity: 215 gallons

Booster Pump Output: 20 gallons per minute

System Dimensions: 73" x 26" x 43"

System Weight: 190 lbs

Water Pressure: 60 psi

Patent Number: US 10,508,420 B2

Warranty: 3-Years

System Voltage: 120V

Compatible Well Voltage: 120V-240V

Operating Watts: 1,600

System Watts With Pump Startup (a few seconds): 2,700

Operating Temperature: 33°~104°F

Get **your** Well Harvester™ today!
